

Look them out.

I will send you a small
box shortly - with some
of the Australian Stimp.
Have you by any chance
a duplicate of the
spat angular - Leakea
mirabilis? I am working
at the Cystideans, and
there are some points about
its structure I want to
make out. Any thing sent
for me at any time to
Mr. John Stevelly - Rue
Theremont 8 - will reach
me safely.

Believe me with the
highest respect -

Yours most truly

Myrtle Thomson.

Myrtle Thomson

STRANDEWN
BELFAST.

February 1st
1888

My dear Colleague,

I was delighted to get
your letter the other day.
Believe me that one
of the greatest pleasures
of my very pleasant trip
to Paris this summer
was that of making
your personal acquaintance.

I was sorry that I did
not see you when I last
called at the Laboratoire.
My time was so short
that I had not an
opportunity of repeating

My visit - I thought
you would be pleased
with the specimen
of *Euplectella* - It is a
lovely thing. I have
just written a short
paper on your two
forms. In the "Annales
and Magazine of
Natural History" - Of course
I will send you this paper
as soon as I get it. The
plate, by the way, is still
on the stone, and if you
thought it worth while,
as the specimens are

both in France, to reprint
it in the "Annales des
Sc. Nat." - I could have
the lettering altered and
send you copies of it, and
indeed I could with
little trouble send you
the description in French.

I am very glad to hear
that you are preparing
another memoir - I have
long felt you work & the
of the highest interest
and value to me.

I have not forgotten the
Halysia - My time has
however been so fully
occupied of late that
I have not had time to
